DIORTHOTIKO KALTSAKI

### RESULTING TERM

GMDN Term: Metatarsophalangeal orthosis  
GMDN Code: 61907

---

Type of Term: P

---

Definition: A non-rigid device intended to be worn on the foot to help prevent and/or reduce hallux valgus deformity, thereby reducing walking pain and bunion formation. It is made of elastic fabric materials and may encompass only the metatarsophalangeal region or extend around the heel for tensioning. It is normally available [non-prescription] over-the-counter (OTC) for use in the home. This is a single-patient use device that can be reapplied by the patient during the treatment period (reusable) before being discarded.
